When we think of the Industrial Revolution we tend to focus on Birmingham's iron and steel mills or Henry Ford mastering assembly line production. However, the third Industrial Revolution, or Digital Revolution, is underway and thriving in Madison! Web-based services, three-dimensional printing and robotics is changing manufacturing facilities, carbon fiber is replacing steel and aluminum, and new techniques let engineers shape objects at a tiny scale.

Robot farmers can detect weeds in fields with a 98% accuracy rate!
